

## Company Stack Research

1. **Lucid.** I would love to work for Lucid because of their core values, and also because my son works for them! They are completely remote now and I also need to work a remote job. Here is a link to technologies they use: <https://www.datanyze.com/companies/lucid-software/371791913> Learning Python at Devmountain could prepare me to apply for an open position. Currently, the only IT position listed is for a Security Engineer Intern, but the description said that if you have half of the requirements/interests listed to apply. Here's a description of their core values and the Security Engineer Intern listing: <https://lucid.co/careers>
2. **NextEra Energy.** Link to their website: <https://www.nexteraenergy.com/> I strongly believe in clean energy! They have an entry-level IT position open using technologies that we are learning at Devmountain. Their preferred qualifications are: 0-1 years of Experience in Java, HTML, CSS, JavaScript (Typescript a plus). Knowledge of frontend framework (like REACT, Angular etc.) Material UI / Ant Design, thorough Full stack Web Application Development understanding. Relational & NoSQL Database. TDD, Continuous Integration, Peer/Mob Programming. AWS Serverless stack (Lambda, S3, DDB, SQS, SNS). They are currently looking for an associate IT programmer analyst.
3. **brandiD.** I would love to work for brandiD because of their mission, values, and the type of work they do. I am going to renew my Bluehost subscription for another 3 years and want to code on the back end of my blogs, if possible, just to see what I can do. I love website design and making websites more personal, and brandiD's website is creative and has so much personality! Here's the link: <https://thebrandid.com/website-design-development/> They are currently looking for a remote WordPress Web Developer. Here are some of their requirements: Able to build from a PSD design in an efficient and flawless manner for the perfect HTML / CSS layouts; Well-versed in WordPress configuration and custom theme development; Deep knowledge and understanding of HTML5, CSS3, PHP and Javascript/jQuery; Fluent with Git, Sass, Gulp, PostCSS and other developer build tools; Fluent with managing a local development environment, deployment tools and staging.
